

BaseModel

```
classDiagram
    class BaseModel
    class api_main_AssetResponse["api.main.AssetResponse"] {
        +market_cap
        +currency
        +additional_fields
    }
    BaseModel <|-- api_main_AssetResponse
```

The diagram illustrates a class hierarchy. At the top is the 'BaseModel' class, represented by a rectangle with three horizontal compartments. The top compartment contains the text 'BaseModel', while the two lower compartments are empty. Below 'BaseModel' is the 'api.main.AssetResponse' class, represented by a shaded rectangle with three horizontal compartments. The top compartment contains the text 'api.main.AssetResponse', the middle compartment contains a list of attributes: '+ market\_cap', '+ currency', and '+ additional\_fields', and the bottom compartment is empty. A blue arrow points from the top of the 'api.main.AssetResponse' class to the bottom of the 'BaseModel' class, indicating that 'api.main.AssetResponse' inherits from 'BaseModel'.

api.main.AssetResponse

+ market\_cap

+ currency

+ additional\_fields
