

BaseModel

```
classDiagram
    class BaseModel
    class MetricsResponse["api.main.MetricsResponse"] {
        +asset_classes
        +relationship_density
    }
    MetricsResponse --|> BaseModel
```

The diagram illustrates a class hierarchy. At the top is the 'BaseModel' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name 'BaseModel', while the two lower compartments are empty. Below 'BaseModel' is the 'api.main.MetricsResponse' class, represented by a shaded rectangle with three horizontal compartments. The top compartment contains the class name 'api.main.MetricsResponse', the middle compartment lists two attributes: '+ asset\_classes' and '+ relationship\_density', and the bottom compartment is empty. A blue arrow with an open triangular head points from the 'api.main.MetricsResponse' class up to the 'BaseModel' class, indicating that 'api.main.MetricsResponse' inherits from 'BaseModel'.

api.main.MetricsResponse

+ asset\_classes

+ relationship\_density
